

POKHARA UNIVERSITY

Level: Bachelor Semester: Fall Year : 2024
 Programme: BE Full Marks : 100
 Course: Web Technology (New) Pass Marks : 45
 Time : 3 hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) What is the purpose of web servers in hosting websites and web browsers in rendering web pages according to the client-server model? Could you also explain the distinctions between front-end and back-end development, as well as the functional and content delivery techniques between static and dynamic websites? 7
- b) What are web protocols? Explain the benefits of HTTPS over HTTP protocol. 8
2. a) How image is inserted in html? Explain the use of Image Maps with necessary program code. 7
- b) Write the html code for the following given design: 8

Fill the form below	
Name	
Password	
Feedback	
Gender	☐ Male ☐ Female
Subject	☐ Web ☐ Math ☐ Graphics ☐ English
Reset All Submit Above Details	

3. a) What are the types of CSS? Explain with necessary program code. 7
- b) Explain Synchronous and Asynchronous communication in JS. How is Asynchronous communication achieved in JS? 8
4. a) Create HTML form that includes (Email, Phone, Password, and Confirm Password and submit button) and write a JS program that validates the user data and displays the alert message if validated successfully. 7

OR

What is a regular expression? How does JS support Pattern matching? Provide some samples of Regx for Email, phone, date, visa card number, etc. Explain all the methods of Regx for pattern matching in JS with an example.

- b) Why is JavaScript called client-side scripting language? Explain event handling in JavaScript with necessary program. 8
5. a) Why PHP called scripting language? How php actually works, along with HTML, CSS and JS? 7
- b) What is the GET and POST method in PHP? How do they differ? Explain \$_SERVER, \$_POST, \$_GET, \$_REQUEST. 8
6. a) What are cookie and session in PHP? Explain the use of them with necessary program code 7
- b) Develop a simple web page that asks for the user's login ID and Password if you provide the correct credentials, it will ask you to put your (name, email, phone, Nationality, and Marks) and store it in the database using a server-side script and also displays them in tabular form. Assume Database name: PU table name: Student. 8

OR

Write a PHP with MySQL code for the following. (Only MySQL code is not allowed. You have to show it with PHP as well)

- i. Create a database with the name "Nepal"
 - ii. Connect with the database name "Nepal".
 - iii. Create a Table with name Family that includes (Name, Gender, Age, Qualification, DOB)
 - iv. Insert any 3 records.
 - v. Display those records in tabular form.
 - vi. Update any 2 records yourself
 - vii. Delete any 2 records yourself
 - viii. Drop Your database
7. Write short notes on: (Any two) 2×5
- a) Session Handling
 - b) Rest and Spread operators
 - c) Php string
 - d) Responsive Web Design

POKHARA UNIVERSITY

Level: Bachelor Semester: Spring Year : 2024
 Programme: BE Full Marks: 100
 Course: Web Technology (New) Pass Marks: 45
 Time : 3 hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.
Attempt all the questions.

1. a) What is the purpose of web servers in hosting websites and web browsers in rendering web pages according to the client-server model? Could you also explain the distinctions between front-end and back-end development, as well as the functional and content delivery techniques between static and dynamic websites? 7
- b) Explain the following terms: 8
 - i. URL vs URI
 - ii. MIME Headers
 - iii. HTTP vs HTTPS
 - iv. SMTP vs POP3
2. a) Explain types of CSS. Define background, position and border CSS properties. 7
- b) Write the html code for the following given design: 8

Fill the form below	
Name	
Password	
Feedback	
Gender	☐ Male ☐ Female
Subject	☐ Web ☐ Math ☐ Graphics ☐ English
Reset All Submit Above Details	

3. a) Create HTML form that includes (Email, Phone, Password, and Confirm Password and submit button) and write a JS program that 7

validates the user data and displays the alert message if validated successfully.

OR

What is a regular expression? How does JS support Pattern matching? Provide some samples of Regx for Email, phone, date, visa card number, etc. Explain all the methods of Regx for pattern matching in JS with an example.

- b) Synchronous and Asynchronous in JS. How Asynchronous is achieved in JS? 8
4. a) Why is Javascript called client-side scripting language? How are JS scripts included in the HTML page, explain with proper example. 7
- b) Perform the following for a string= "Pokhara University" 8
 - i. Find the length of the string.
 - ii. Find whether the 'Uni' pattern is occurred or not.
 - iii. Display only Pokhara from the string.
 - iv. Find the Ascii value of character present at 4th index.
5. a) Why PHP called scripting language? How php actually works, along with HTML, CSS and JS? 7
- b) What are sessions and cookies? Mention any 5 differences between them with an example. The example must include all the functions of the sessions and cookies. 8
6. a) What is the GET and POST method in PHP? How do they differ? 7
- b) Explain \$_SERVER, \$_POST, \$_GET, \$_REQUEST. 8
- Develop a simple web page that asks for the user's login ID and Password if you provide the correct credentials, it will ask you to put your (name, email, phone, Nationality, and Marks) and store it in the database using a server-side script and also displays them in tabular form. Assume Database name: PU table name: Student.

OR

Write a PHP with MySQL code for the following. (Only MySQL code is not allowed. You have to show it with PHP as well)

- i. Create a database with the name "Nepal"
- ii. Connect with the database name "Nepal".
- iii. Create a Table with name Family that includes (Name, Gender, Age, Qualification, DOB)
- iv. Insert any 3 records.
- v. Display those records in tabular form.

- vi. Update any 2 records yourself
- vii. Delete any 2 records yourself
- viii. Drop Your database

7. Write short notes on: (Any two)

2×5

- a) Math function in PHP
- b) Rest and Spread operators
- c) Hyperlinks and Hypermedia
- d) Responsive Web Design

(WT-New - 2024 spring)

POKHARA UNIVERSITY

Level: Bachelor Semester: Spring Year : 2025
 Programme: BE Full Marks : 100
 Course: Web Technology (New) Pass Marks : 45
 Time : 3 hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) If you are making a website for your company, what will you prefer, static website or dynamic website? Explain. 8
- b) What are web servers and web browsers? Outline the steps involved in registering a domain name, and explain the hierarchy of a domain name system. 7
2. a) Design following layout. 8

Day/Time	7:00 - 8:40	8:40 - 10:20	10:20 - 11:10	11:10 - 12:50	12:50 - 2:30
Sunday	Web	DBMS		Algebra	Microprocessor
Monday	OS	Algebra		Web	Microprocessor
Tuesday	Web	DBMS	Break	OS	Microprocessor
Wednesday	Microprocessor	DBMS		Web	OS
Thursday	Web	DBMS		Algebra	Microprocessor
Friday	Web	DBMS		OS	Microprocessor

Above Routine, effective from coming Sunday.

- b) Define lists in HTML. Also, explain the use of images and image maps with suitable examples. 7
3. a) Importance of CSS in web development? Define the purpose of the following CSS properties: text-transform, z-index, scale, and outline. 8
- b) What is the role of selectors in CSS? Provide examples of the :blur, :focus, and :hover pseudo-classes, as well as the ::before and ::after pseudo-elements. 7

OR

How can you insert CSS in website? Explain its types. What will happen if CSS types are overridden?

4. a) Create an HTML form that allows users to input their Full Name, Email, and Mobile Number. Then, write a JavaScript program to validate this user data and display a success message if the inputs are valid. 8

OR

Page 1 of 2

Perform the following array methods and explain what each one does.

- i. join()
- ii. toString()
- iii. pop()
- iv. push()
- v. shift()
- vi. unshift()
- vii. slice()
- viii. splice()
- b) What is form validation? Using JavaScript, validate whether the form fields are empty and format for the email and phone number is right. 7
5. a) How is client-side scripting different from server-side scripting? Explain arrays, loops, and conditional statements in PHP. Also, explain how PHP is implemented with HTML, CSS, and JS. 8
- b) \$Num [200,60,100,10,1000,70,90,80] Perform the following 7
 - i. Sort the given array in ascending and descending order
 - ii. Calculate the sum and average of an array
 - iii. Find the min and max value from the given array
 - iv. Reverse the given array
 - v. Convert it into a string
 - vi. Check whether 100 lies in the array or not
 - vii. Add new element 500 in front and 600 at last.
6. a) Write a PHP script that handles user login(Email and Password). If the login is successful, redirect the user to homepage.php; otherwise, display a "Sorry" message. 8
- b) Write PHP syntax to perform CRUD operations on an 'Employee' table in a MySQL database. The table should include fields such as id, name, email, department, and salary. Provide necessary forms and database queries to support all operations. 7
7. Write short notes on: (Any two) 2×5
 - a) let, const and var
 - b) Date methods in JS
 - c) Pattern matching in PHP

Page 2 of 2

POKHARA UNIVERSITY

Level: Bachelor
Programme: BE
Course: Web Technology (New)

Semester: Fall

Year : 2025
Full Marks : 100
Pass Marks : 45
Time : 3 hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) What is a web server? How is domain name conversion carried out? 7
- b) Differentiate between HTTP and HTTPS. Explain MIME and its use on the web. 8
2. a) What do you mean by CSS selectors? Explain types of CSS with pros and cons. 7
- b) Design following layout. 8

Fill the form below	
Name:	
Password:	
Gender:	☐ Male ☐ Female ☐ Others
Subject:	☐ Web ☐ C ☐ C++ ☐ C#
Reset all Save	

3. a) Why is CSS used in Web designing? Explain different levels (types) of style sheets with examples. 7
- b) What is the CSS box model? Explain with an appropriate example. 8
4. a) Define validation. Create an HTML form that allows users to input their Email, and Password. Then, write a JavaScript program to validate email and password (At least 8 character and must include one special character). 7

OR

Why is JavaScript called client-side scripting language? Write the code for email validation in JavaScript.

- b) Define Asynchronous and Synchronous in JS. How can you write an asynchronous JavaScript program that reads data from a students.json file and present each record in HTML Ordered list? 8

Page 1 of 2

5. a) Why is PHP called a server-side scripting language? Explain the difference between GET and POST methods. 7
- b) Write a PHP script that handles user registration (Full name, Email, Password and Confirm-password). If the Password and Confirm-password matched, insert record into table. 8

OR

Why Regular Expression is used? How does PHP support pattern matching? Validate data from user input through html form using pattern matching.

6. a) What are sessions and cookies? Mention any 5 differences between them with an example. Create a given form that responds (1) "cookie is set" when you provide a name (for eg: Ram) and click the set cookie button. (2) displays the "cookie name: Ram" when you click display cookie, and finally, (3) "cookie is deleted" when you click delete cookie. 7

Enter some name
Set Cookie Display Cookie Delete Cookie

- b) Create a login-based system for students. After login success, allow entry of Student Name, Course Name, Email, Enrollment Date, and Semester. Store and display all enrollment data in a table format. Database: CollegeDB Tables: Login, Enrollment 8
7. Write short notes on: (Any two) 2×5
 - a) JS DOM tree
 - b) URL vs URI
 - c) Event and Event Handling in JavaScript

Page 2 of 2

POKHARA UNIVERSITY

Level: Bachelor Semester: Fall Year : 2015
Programme: BE Full Marks: 100
Course: Web Technology Pass Marks: 45
Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) Define DNS. Explain about web server operations in detail. 7
b) Differentiate between SMTP & POP protocols. Explain about web server. 8
2. a) What tag is used to define a link and explain its attributes with example? 7
b) Explain types of list with their attributes and examples. 8
3. a) What is the purpose of style sheets? What is the advantage of external style sheets over inline and document-level style sheets? 7
b) Explain CSS box model with an appropriate example? What is the purpose of class selector? 8
4. a) What do you know about JavaScript DOM? Explain different kinds of dialog boxes. 8
b) Using JavaScript event write a program that changes the visibility of HTML elements. 7
5. a) Why JavaScript is useful in WebPages? Give the difference between Java & JavaScript with examples. 7
b) Explain session and cookies with examples. 8
6. a) Write a server side script for user registration having input fields name, password, age, email, phone with a proper client side validation. 8
b) Write a PHP program that creates a table "Employee (id, name, department, phone, age, address)" and insert query to insert a new row in that table. 7
7. Write short notes on: (Any two) 2
a) Array in PHP.
b) JavaScript Event
c) Pattern Matching in PHP

POKHARA UNIVERSITY

Level: Bachelor Semester: Spring Year : 2015
 Programme: BE Full Marks: 100
 Course: Web Technology Pass Marks: 45
 Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) What do you mean by protocols? Explain the use of following: 8
 protocols:
 i. HTTP
 ii. DHCP
 iii. POP3
 iv. FTP
- b) What are META tags? Explain with suitable example. 7
2. a) Write a HTML code to generate following table with form elements. 10

Fill the form below	
Name:	
Password:	
Feedback:	
Gender:	☒ Male ☐ Female
Subject:	☐ Web ☐ Math ☐ Graphics ☐ English
	Submit Reset

- b) What is a Frame? List out the advantages and disadvantages of using a Frame. 5
3. a) Why CSS is used in Web designing? Explain different levels (types) of style sheets with example. Also write advantages and disadvantages of each. 8

- b) List out the Font, Background, Text & Border properties with values. 7
 Explain uses of Span & Div tag.
4. a) What is Document Object Model (DOM) in JavaScript? Explain with example. 7
- b) Write a program in JavaScript to display a prompt for 2 numbers, and show its sum in alert box. 8
5. a) What are the main uses of PHP in web programming? Why PHP is called as Server Side Scripting Language? 8
- b) Explain the importance of Session in PHP with suitable code. 7
6. a) Write a PHP and MYSQL code to check authorized user for your web site. 7
- b) Explain select, insert, update, delete and join MYSQL Command with an example. 8
7. Write short notes on: (Any two) 2x5
 a) Domain Name Registration
 b) Event and Event handling in JavaScript
 c) Dragging and dropping element

Level: Bachelor	Semester: Fall	Year : 2016
Programme: BE		Full Marks: 100
Course: Web Technology		Pass Marks: 45
		Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.
The figures in the margin indicate full marks.
Attempt all the questions.

1. a) Is the Internet and Web same? Write about the differences between internet, intranet and extranet. 7
- b) Discuss the terminologies HTTP, POP and SMTP in web technology in detail. 8
2. a) What is HTML? Explain basic syntax of HTML? How HTML differs from XHTML? 6

Write HTML code for following:	
LIST with Links 1. EPL - o <u>Man City</u> - o <u>Chelsea</u> - o <u>Liverpool</u> 2. LALIGA • <u>Real Madrid</u> • <u>Barcelona</u>	IMAGE  

- | | | | |
|----|----|---|----|
| 3. | a) | What is CSS? What are the different levels of style sheets? Illustrate all types with example. | 10 |
| | b) | What DOM stands for? Describe DOM model in JavaScript. | 5 |
| 4. | a) | Can JavaScript be used as server side script? How element visibility can be changed using JavaScript? Explain with example. | 7 |

- | | | |
|-------|---|-----|
| b) | Write a program in JavaScript to validate a form. The user form includes user name, phone no. and submit button. On clicking the submit button validate the following : | 8 |
| | <ul style="list-style-type: none"> i. If the name or phone no. fields are blank. ii. If the phone number contains numeric digits only. | |
| 5. a) | Write about PHP. What are the main uses of PHP in web programming? Explain different kinds of array in PHP. | 7 |
| b) | Explain about Form handling and File handling in PHP with examples. | 8 |
| 6. a) | Discuss the use of cookies and sessions with example scenario of each in PHP. | 10 |
| b) | Write CRUD queries required to connect, fetch, delete and update data in PHP from MYSQL. | 5 |
| 7. | Write short notes on: (Any two) | 2×5 |
| a) | MIME | |
| b) | Lists in HTML | |
| c) | Changing colors and fonts with JavaScript. | |

Level: Bachelor	Semester: Spring	Year : 2016

| b) Why JavaScript is called as Client Side Scripting Language? Explain the Prompt Box in JavaScript with syntax only. | 7 | | |
| 4. a) Write a JavaScript program which validates the user data (name, email, contact no) and displays the success message if validated successfully. Also create the HTML form for entering the data. | 8 | | |

Level: Bachelor	Semester: Fall	Year : 2017
Programme: BE		Full Marks: 100
Course: Web Technology		Pass Marks: 45
		Time : 3hrs

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) What protocol is used by all computer connections to the Internet? /
Describe a fully qualified domain name with example
- b) What is the purpose of a MIME type specification in a request/response transaction between a browser and a server? 8
2. a) Write an HTML to create the following table: 8

Life Expectancy By Current Age							
65		40		20			
Men	Women	Men	Women	Men	Women		
32	85	78	32	77	81		

Click [here](#) for more details.

- b) Create an HTML document that contains five different headlines from a newspaper headline. Each headline should use a different heading tag and a different color. Make all the text use the Helvetica font. Every verb in the text must have a line through it.
3. a) What is the difference in behavior between a group of checkbox buttons and a group of radio buttons? Under what circumstances is a select menu used instead of a radio button group?
- b) What do you mean by CSS? What is the advantage of external style sheets over inline and document-level style sheets?
4. a) Explain DOM? Explain Handling event from page load and button elements with an example.
- b) Create an HTML form that takes user's email address and password. Validate the form using JavaScript when the submit button is clicked. Make sure that the fields are not empty and the email address is a

5. a)	Explain constructor in JavaScript with example.	7
b)	How are cookie and session different? Give examples to support your answer.	8
6. a)	Write MySQL query to:	8
a.	Create a database named management and use it.	
b.	Create a table named users with id(integer), name(string), email(string), password(string), subscriber(Boolean).	
c.	Insert data in the table	
d.	Extract data from the table	
b)	Write a server side script for user registration having input fields name, password, age, email, phone with a proper client side validation.	7
7.	Write short notes on: (Any two)	2x5
a)	Web hosting	
b)	Array in PHP	
c)	frameset	

POKHARA UNIVERSITY

Level: Bachelor Semester: Spring Year : 2017
Programme: BE Full Marks: 100
Course: Web Technology Pass Marks: 45
Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) Explain in brief about the domain name registration and hosting process.
b) How does HTTP works? Describe.
c) Describe the structure of standard HTML document.
2. a) Write HTML tags to generate the following form:

Student Directory

Name	
Class	
Roll No.	
E-mail	
Reset Save	

- b) What are the different levels of style sheets? Mention different style specification formats with appropriate examples.
3. a) Describe different properties and property values associated with fonts, lists, colors and images.
b) What do you mean by DOM in Java Script? Why is Java Script called client side scripting language?
4. a) How do you move elements, change font styles of the texts and drag & drop elements with Java Script? Explain with appropriate examples.
b) Write a program in Java Script to validate a form. The user form includes user email, password and submit button. On clicking the submit button validate the following:
 - i. if the email or password fields are blank

- ii. if the format used for email is right.
5. a) What is type conversion? How do php deal with type conversions? Explain. 7
b) Write necessary php scripts to make connection with the database and insert/save form data in question no. 2(a) into database. 8
6. a) How is array implemented in php? Explain. 7
b) What is session? What is the importance of session handling in web programming? Explain 8
7. Write short notes on: (Any two) 2×5
a) MIME
b) Frames
c) File handling in php

POKHARA UNIVERSITY

Level: Bachelor Semester: Fall Year : 2018
 Programme: BE Full Marks: 100
 Course: Web Technology Pass Marks: 45
 Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) Define DNS. Explain about HTTP and MIME protocols.
 b) A company asked you to develop website for it. Which language and tools will you use for the development and why? Also how can you put the website online?
2. a) Write a HTML code to generate following table with form elements

Fill the form below	
Name:	
Password:	
Feedback:	
Gender:	☐ Male ☐ Female
Subject:	☐ Web ☐ Math ☐ Graphics ☐ English
Reset All Submit Above Details	
- b) Discuss how events are handled in JavaScript.
3. a) Why CSS is used in Web designing? Explain different levels (types) of style sheets with example. Also write advantages and disadvantages of each.
 b) Explain the DOM model used in JavaScript.
4. a) Write JavaScript code to illustrate element positioning, stacking elements and mouse cursor.
- b) Explain the origin, major features and arrays of PHP.
5. a) Write a program in PHP to list out all prime numbers within a given range.
- b) Why JavaScript is called as Client Side Scripting Language? Explain the Popup Box in Javascript with syntax only.
6. a) What are cookies? How can we write a cookie on user computer? Explain with a sample code.
- b) How do you connect PHP with MySQL? Write a PHP code that retrieves the name and password from database.
7. Write short notes on: (Any two)
 - a) Session Handling
 - b) Multimedia in HTML
 - c) RSS feed

POKHARA UNIVERSITY

Level: Bachelor	Semester: Spring	Year : 2018
Programme: BE		Full Marks: 100
Course: Web Technology		Pass Marks: 45
		Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) What is image map in HTML? Write a HTML code to show the mapping of image. 5
- b) What is the function of Domain Name System? Write about the differences between LAN, WAN, MAN, PAN and Web. 8
2. a) Explain the following: 7
 - i. URL vs URI
 - ii. MIME Headers
 - iii. HTTP vs HTTPS
 - iv. SMTP vs POP3
- b) Create an HTML form with one textbox for getting name, one textbox for getting password, two radio buttons for getting gender (male and female), dropdown for getting subjects (Web, Math) and textarea for getting feedback. 2×5
3. a) What are the main purposes of id and class selectors? Explain with respective examples.
- b) Define DOM. Write JavaScript function to validate a form input field for **onblur** event whether it is blank or not and contains number or not.
4. a) Is JavaScript Object Oriented Programming Language? Illustrate your answer with suitable reasons and examples.
- b) Write JavaScript code to find the factorial of a number requesting a number from user using prompt.
- c) How dragging and dropping of XHTML elements is possible in JavaScript?
5. a) Explain the use of PHP `$_GET` and `$_POST` variables.
- b) Explain the CRUD operation in MySQL along with example.
- c) Explain the uses of pattern matching in PHP with suitable example. 5
- a) Describe Starting, Storing and Destroying a Session. Explain with sample codes. 8
- b) Write a PHP code that connects with the database and insert (firstname, lastname, age) in a table using insertion query. 7

Write short notes on: (Any Two):

- a) Domain Registration Process
- b) Div and Span
- c) MySQL Joins

POKHARA UNIVERSITY

Level: Bachelor Semester: Fall Year : 2019
 Programme: BE Full Marks: 100
 Course: Web Technology Pass Marks: 45
 Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) What are the functions of MIME? Explain the protocols that are used in e-mail. 8
- b) Explain the essential difference between: 7
 - i) URL and URI
 - ii) HTTP and FTP
2. a) Why table-less design is preferred more than table-based design? 8

Write HTML code for following :

Roll no:	Name	Subjects			
		C	Web	Math	C++
1	Abhisek	50	45	60	70
2	Suresh	50	45	45	NQ
3	Yodhin	80	85	90	75

Contact to department if Not Qualified(NQ)

- b) What is image map in HTML? Explain with an example. 7
3. a) What are the advantages of using CSS over tables to create websites? Explain different CSS selectors with examples. 8
- b) How can you validate form in JavaScript? Write a program to explain it. Your program must contain email, password and submit button. On clicking validate whether the fields are blank and the format for the email is right. 7
4. a) What do you mean by event and event handling? Explain the handling mechanism in javascript. 7
- b) What is the difference between '==' and '===' in JavaScript? How dynamic contents and stacking of XHTML elements are made possible in JavaScript? 8
5. a) What are the main uses of PHP in web programming? How a file handling is done in PHP? 7

- b) Make a login form with e-mail and password. Write a program to make dynamic login using php and MYSQL query. Your program must contain database connection file from php to MYSQL. 8
6. a) How is array implemented in PHP? Differentiate between *foreach* loop and *each()* function with example. 7
- b) Explain the uses of pattern matching in PHP with suitable example. 8
7. Write short notes on: (Any two) 2×5
 - a) Levels of style sheets
 - b) DOM Hierarchy in JavaScript
 - c) SQL Joins

POKHARA UNIVERSITY

Level: Bachelor	Semester: Spring	Year : 2019
Programme: BE		Full Marks: 100
Course: Web Technology		Pass Marks: 45
		Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) Define Internet. Explain two-tiered and three-tiered web architectures. 7
b) Define URL and domain name. Explain about HTTP, FTP and WAP protocols. 8
2. a) Create an HTML form with one textbox for getting name, one text box for getting password, two radio buttons for getting gender (male and female), dropdown for getting subjects(WT, Math, C, C++), text area for getting feedback and one submit button. 8
b) Define Empty HTML Elements with examples. Explain the uses of <frame>, <iframe> and <table> tags in HTML with examples of each. 7
3. a) Define CSS. Why it is important? Explain and <div> tags with examples. 8
b) Write a program to explain e-mail validation. Your program must contain email, password and submit button. On clicking, validate whether the fields are blank and the format for the email is right. 7
4. a) Define event. Explain about event handling mechanism in Javascript with example. 7
b) Is there any possibility of dynamic stacking of images in JavaScript? Explain your answer with an example. 8
5. a) What type of programming is PHP programming? Explain about its general syntactic characteristics. 7
b) Write a PHP and MySQL code for the following: 8
i. Create a database 'institute' with a table 'tbl_users' and fields on table as 'id', 'name', 'roll', 'mobile_number', 'email', 'status' with 'id' as primary key.
ii. Create HTML form for getting data on (i). Write PHP code to read data submitted from the form and insert it on 'tbl_users'. Also, apply the server side validation mechanism for empty inputs.
6. a) Explain the implementation of session and cookies in PHP with 8

example codes of each.

- b) Why is SQL join needed? Illustrate it with different types of SQL Joins with examples. 7
7. Write short notes on: (Any two) 2×5
a) Box model in CSS
b) Dragging and dropping elements in javascript
c) Indexed and associative arrays in PHP

POKHARA UNIVERSITY

Level: Bachelor Semester: Fall Year : 2020
 Programme: BE Full Marks: 100
 Course: Web Technology Pass Marks: 45
 Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.
 The figures in the margin indicate full marks.
 Attempt all the questions.

1. a) What is web standard? Explain different types of web standards available in web technology with example. 8
- b) Define DNS? Explain the uses of following protocols in web technology: 7
 - i) HTTP
 - ii) POP
 - iii) FTP
2. a) Write HTML tags to generate the following forms: 8

Students Data Entry Form

Student Name:

Address:

College:

Email:

Gender: ☐ Boy ☐ Girl ☐ Other

Subjects: ☐ PQT ☐ WT ☐ DSA ☐ LC ☐ EMTH-III ☐ ECAI

City / Town:

Comments:

- b) What are the two required attribute of tag in HTML? Describe different types of multimedia format used in HTML with example. 7
3. a) What is the purpose of CSS? List out Different Types of CSS Selectors. Explain box model in CSS with suitable figure. 7
- b) Define DOM. Differentiate between DOM 0 and DOM 2 event models in JavaScript with suitable examples. 8
4. a) What is the difference between == and === in JavaScript? Write down the different data types in JavaScript with example. 7
- b) How can we locate the mouse cursor and react to mouse clicks in JavaScript? Explain with example. 8
5. a) Why PHP is called server-side scripting language? Explain output and control statements in PHP with examples. 7
- b) Differentiate cookie and session. Explain with an php program. 8
6. a) In what ways can arrays in PHP be created? How can we access array elements? Briefly describe functions for dealing with arrays in PHP. 7
- b) Make a login form with e-mail and password. Write a program to make dynamic login using php and MYSQL query. Your program must contain database connection file from php to MYSQL. 8
7. Write short notes on: (Any two) 2x5
 - a) Stacking Elements in JavaScript
 - b) Dynamic content in JavaScript.
 - c) CRUD Operation in MYSQL.

POKHARA UNIVERSITY

Level: Bachelor Semester: Fall Year : 2021
 Programme: BE Full Marks: 100
 Course: Web Technology Pass Marks: 45
 Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) Discuss the need of web browser and web server in accessing the Internet. Also List the different MIME headers and explain them. 7
- b) Explain the essential difference between: 8
 - i) URL and URI
 - ii) HTTP and FTP
2. a) Why table-less design is preferred more than table-based design? Write HTML code for following : 8

Roll no:	Name	Subjects			
		C	Web	Math	C++
1	Abhisek	50	45	60	70
2	Suresh	50	45	45	NQ
3	Yodhun	80	85	90	75

Contact to department if Not Qualified(NQ)

- b) Explain Standard HTML document Structure. How would you map image in HTML? 7
3. a) Create a HTML page with a div with some content and two paragraph tags with some content having ID P1 and P2. Write external css for the div tag having fixed position with border style solid and width 2px. The P1 should have relative position. The font type of P1 should be Arial and color should be green. The P2 have absolute position with top 0px and left 200px. 8
- b) How can you validate form in JavaScript? Write a program to explain it. Your program must contain email, password and submit button. On clicking, validate whether the fields are blank and the format for the email is right. 7

4. a) What do you mean by events and event handling? How will you locate mouse cursor using JavaScript? Explain with code. 2+5
- b) What is DOM? Write a code synopsis to represent dragging and dropping of elements in JavaScript. 2+6
5. a) How can you define variable in PHP? Define any two variable of string types and display their results after concatenation. 7
- b) How is array implemented in PHP? Differentiate between foreach () loop and each () function with example. 8
6. a) Make a login form with e-mail and password. Write a program to make dynamic login using php and MYSQL query. Your program must contain database connection file from php to MYSQL. 8
- b) Describe Starting, Storing and Destroying a Session. Explain with sample codes. Also, differentiate between Session and Cookies. 7
7. Write short notes on: (Any two) 2×5
 - a) DOM Hierarchy in JavaScript
 - b) Client side Vs server side scripting
 - c) Ordered and unordered list

POKHARA UNIVERSITY

Level: Bachelor Semester: Spring Year : 2021
 Programme: B.E. Full Marks: 100
 Course: Web Technology Pass Marks: 45
 Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.
 The figures in the margin indicate full marks.
 Attempt all the questions.

1. a) What is hosting? Explain any four types of hosting. 8
 b) What is the purpose of MIME type specification in a request/response transaction between a browser and a server? 7
2. a) What are the different types of lists available in HTML? Explain each with suitable example code. 8
 b) Write HTML tags to generate the following form: 7

List with links	Image
Karnali • Bardia • Banke • Jumla	
Bagmati • Kathmandu • Bhaktapur • Lalitpur	

3. a) What are the different levels of style sheets with their hierarchy of implementation? Explain the float and clear properties with a valid and detailed example. 7
 b) What are physical and logical tags? Give examples also. 4
 c) What do you mean by table-less design and how will you achieve it using CSS? 4

4. a) What do you mean by DOM in JavaScript? How do you get elements from document to JavaScript? Write an example of all methods. 7
 b) Write a JavaScript program which validates the user data (name, email, contact no) and displays the success message if validated successfully. Also create the HTML form for entering the data. 8
5. a) What do you mean by events and event handling? Write HTML and JavaScript code to create and display a digital clock. 7
 b) What are different file handling methods available in PHP? After validating the form values in Question 5 (a) write the contents to a 'users.txt' file with TIME of login. The content of file should look like: (no need to write the validation code in this answer). Also redirect user to home.php after writing contents to file. 8
 Name: abc sharma, Email: testuser@gmail.com, Logged-in on: Fri Feb 01 2020 17:56:06 GMT+0545 (Nepal Time)
6. a) Explain the use of PHP \$_POST, \$_GET and \$_REQUEST variables. 7
 b) Write PHP-MySQL code validate the user log-in data (email and password). That is check whether the user data is available in database or not. Also in another file write code to display the user information (name and email). (Assume database name to be 'testdb' and table name 'users') 8
7. Write short notes on: (Any two) 2x5
 a) Hyperlinks and hypermedia
 b) Pop-up boxes in JavaScript
 c) Types of array in PHP

POKHARA UNIVERSITY

Level: Bachelor Semester: Fall Year : 2022
 Programme: BE Full Marks: 100
 Course: Web Technology Pass Marks: 45
 Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) Let us assume a scenario, where person 'A' send an email to person 'B' and person 'B' response to person 'A'. Now, explain the sending and receiving process of email. 8
- b) What happens if you enter <https://pu.edu.np> into your browser? Describe the procedures behind the screens. Describe along with its block diagram. 7

2. a) Write HTML tags to generate the following design: 8

Labels	Input Fields
Full Name	
Gender	☐ Male ☐ Female ☐ Others
Email	
Address	
Choose Color	<input type="color"/>
Upload Profile Picture	
Register	

- b) Explain Standard HTML document Structure. Why table-less design is preferred more than table-based design? How grouping of elements is possible in HTML? 7
3. a) What are overriding rules in css? List out different types of css selectors. Explain box model in css with suitable figure. 7
- b) Write any 2 syntactic characteristics of JavaScript. Explain about different element access methods in JavaScript. 8
4. a) Why JavaScript is called dynamically typed Language? Explain with example how variables are declared in JavaScript. 5

- b) Why JavaScript is called loosely typed Language? Explain with example how type conversion takes place in JavaScript. 5

- c) Write a JavaScript program to input principal, time, and rate using prompt and display the calculated Simple Interest using alert 5

5. a) Write PHP inbuilt function to perform the following operations: 7

```
$list = [2, 6, 10, 8, 4, 7]
$slang = ["PHP", "JS", "C", "CPP"]
$days = ["Mon"=>2, "Tue"=>3, "Wed"=>4, "Thu"=>5];
```

- i. Delete an individual element (8) from \$list array.
- ii. Assess last element from \$slang array.
- iii. Extract values from \$days array.
- iv. Extract keys from \$days array.
- v. Access third element from \$list array.
- vi. Sort \$list in ascending order.
- vii. Check if value (20) exists in \$list array.

- b) What are sessions and cookies? Mention any 5 differences between them with an example. An example must include all the functions of the session and cookies. 8

6. a) Develop a login form that includes Username and Password (Username= "admin" Password= "admin" already present in your database). Write a PHP and MYSQL code, first to verify log-in credentials. Second, when login is successful it navigates to the form that includes Name, Email, Phone, Password, and confirm Password. When you fill out the form it should display the information in the table structure. (Show database connection and assume database name and table name yourself) 8

- b) Explain the use of PHP \$_COOKIES, \$_SESSION. How to write content in a particular file using PHP? 7

7. Write short notes on: (Any two) 2x5

- a) Math Function in PHP (any 4)
- b) Level of Style Sheets
- c) DOM tree

POKHARA UNIVERSITY

Level: Bachelor Semester: Spring Year : 2023
 Programme: BE Full Marks: 100
 Course: Web Technology Pass Marks: 45
 Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) If you are making a website for your company, what will you prefer, static website or dynamic website? Explain. 8
- b) What is a domain and fully qualified domain name? How can we register a domain name? Differentiate top-level and second-level domains. 7

2. a) Write HTML code to generate the following forms: 8

Student Informations	
Your Name	
Gender	Male ☐ Female ☐
Email	
Address	
Your pic	Choose File No file chosen
Education	Master Degree v
Register	Master Degree Bachelor's Degree Plus two SEE

- b) Explain basic structure of HTML. Also illustrate display property and its different values. 7
3. a) Explain the different levels of style sheets with their hierarchy of implementation. What will be the actual height and width of content if padding, margin, border, content height, content width is 20px? Show using a box model. 8
- b) What do you mean by event and event handling? Write a program that take number from the user and results its factorial after clicked on button "CALCULATE". 7

- a) Add two new fields phone and password to Q2(a) and validates it with JavaScript. 8

Requirements:

- i. All input fields should be filled else *required message should be displayed.
- ii. Name should be of minimum length 3.
- iii. Email should start with capital letter.
- iv. Phone should be of length 10 and must be in format XXX-XXX-XXXX; where X = digit from 0-9]
- v. Password must start with a number and end with @.

- b) Why are Constructors used in JavaScript? Describe the different types of element positioning and element visibility properties in JavaScript. 7

- a) What are sessions and cookies? Mention any 5 differences between them with an example. An example must include all the functions of the session and cookies. Also, write a session program to count no. visits on the website. 8

- b) Why PHP is called scripting language? How PHP actually works, along with HTML, CSS and JS? 7

- a) Prepare a registration form to read student's informations (Name, Address, Age, e-mail and password) and save these informations in Database. Now make another page for login and display the informations after checking valid email id and password using PHP and MYSQL query. Make database name as "Pokhara" and table name as "info". 8

- b) What do you mean by file handling? Write a PHP program to calculate area of rectangle and store the output into "data.txt". 7

Write short notes on: (Any two)

2×5

- a) CSS Properties and Property values.
- b) String function in PHP (any 5)
- c) DOM model

POKHARA UNIVERSITY

Level: Bachelor
Programme: BE
Course: Web Technology

Semester: Fall

Year : 2023
Full Marks: 100
Pass Marks: 45
Time : 3hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) Define VPS(Virtual Private Server) hosting. How http protocol works. Explain with diagram. 7
- b) How to register a domain name? Explain root-level domains, top-level domains, second-level domains, and subdomains with their differences. Also, mention all the domains for <https://www.pouexam.edu.np>. 8
2. a) Write HTML code to generate the following forms: 7

Forms and Controls

Student Name:

Gender: ☐ Boy ☐ Girl

Subjects: ☐ Web Tech ☐ E.MATH ☐ PQT ☐ DSA ☐ EC&I

City / Town:

Clear	Sub	KTM
		Pokhara
		Nagerkot
		Bhaktapur

- b) What are pseudo classes in CSS? Also design following logo using pseudo element. 8

3. a) What do you mean by DOM in JavaScript? How do you get elements 7

- from documents? Write an example of all methods.
- b) Write a JavaScript program which validates the user data (name, email, contact no) and displays the success message if validated successfully. Also create the HTML form for entering the data. 8
4. a) What do you mean by event and event handling? Write a program that take three numbers from the user using prompt and results greatest number after clicking on button "I am Greatest". 7
- b) What are sessions and cookies? Mention any 5 differences between them with an example. An example must include all the functions of the session and cookies. 8
5. a) Why PHP called scripting language? How PHP actually works, along with HTML, CSS and JS? 7
- b) What is the purpose of var_dump() and var_export() ? Define an Associative arrays and perform following operation sequentially : 8
 - i. Merge (arr1 and arr2)
 - ii. Sort(Key basis)
 - iii. Print all elements using foreach() loop
6. a) What are the applications of PHP? Explain the major features of PHP arrays. 7
- b) Develop a login form that includes Username and Password (Username= "admin" Password= "admin" already present in your database). Write a PHP and MYSQL code, first to verify login credentials. Second, when login is successful it navigates to the file which asks for Your Name, Email, Phone, and Address. When you fill it out it should display the information in the table structure. (Show database connection and assume database name and table name yourself)
7. Write short notes on: (Any two) 2x5
 - a) Frameset VS iframe
 - b) String function in PHP(any 4)
 - c) DOM model

Level: Bachelor	Semester: Spring	Year : 2024
Programme: BE		Full Marks: 100
Course: Web Technology		Pass Marks: 45
		Time : 3 hrs.

The figures in the margin indicate full marks.

Attempt all the questions.

- | | | | |
|----|----|---|---|
| 1. | a) | What do you mean by WWW? Write the difference between internet, intranet and extranet. | 7 |
| | b) | Explain the difference between front-end and back-end web development. How does a web browser communicate with a web server to load a webpage? Also, mention key differences between a web application and a website. | 8 |
| 2. | a) | Write the HTML code for the given design. | 7 |

Roll no:	Name	Subjects			
		C	Web	Math	C++
1	Abhisek	50	45	60	70
2	Suresh	50	45	45	NQ
3	Yodhin	80	85	90	75

Contact to department if Not Qualified (NQ)

9	100mm	80	85	90	75
Contact to department if Not Qualified (NO)					

- b) Explain the term HTML used in web-technology. What are the different types of tags used in HTML? How HTML differs from XHTML? 8
3. a) What is the function of selectors in CSS? Explain all sorts of selectors used in CSS with an example. 7
- b) Write a JavaScript program which validates the user data (name, email, contact no) and displays the success message if validated successfully. Also create the HTML form for entering the data. 8
4. a) What do you mean by DOM in JavaScript? How do you get elements from documents? Write an example of all methods. Also, mention the difference between querySelector and querySelectorAll. 7
- b) How events can be handled in JavaScript? Write a JS code for the following o/p. When the user provides a number from 1-7 it should return day, i.e.(1-Sunday, 2-Monday and so on) 5

Write Number of day of a week

4 Try it

Today is Wednesday

- | | | |
|-------|---|---|
| c) | Why JavaScript is called a loosely and dynamically typed language? Write one syntactic characteristics of JS. | 3 |
| 5. a) | Explain the use of PHP <code>\$_GET</code> , <code>\$_POST</code> , <code>\$_SERVER</code> code in PHP with example. | 7 |
| b) | \$num=[2,6,10,8,4,7] \$lang=["PHP", "JS","C", "CPP"] create the given array and
From the above array solve the following question
i. Check if value 20 exists in \$num array.
ii. Access 3rd element from \$num array.
iii. Delete an individual element 8 from the \$num array.
iv. Combine \$num and \$lang array. | 8 |
| 6. a) | What are sessions and cookies? Mention any 4 differences between them with an example. Also, explain how <code>\$_SESSION</code> can be used to manage the state on the web with login and logout. | 7 |
| b) | Write PHP script to insert form data to database table on form submit. Where every data must be in lowercase before inserting into table. Also, develop the webpage as below: (No need to write CSS code) | 8 |

Full Name

Email

Address

7. Write short notes on: (Any two) 2×5
- a) Array methods in JS (Any 5)
 - b) MIME
 - c) Regular expression and pattern matching in PHP
 - d) Box model in CSS

POKHARA UNIVERSITY

Level: Bachelor Semester: Fall Year : 2024
 Programme: BE Full Marks : 100
 Course: Web Technology Pass Marks : 45
 Time : 3 hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) Differentiate static and dynamic websites with their applications and limitations of each. 8
- b) Explain the Domain Name System (DNS) and its hierarchical structure. How is a domain name registered, and what role does web hosting play in ensuring a website's accessibility on the Internet? 7
2. a) Explain the following aspects of HTML with examples: 8
 - i. Images: The purpose of the tag and its key attributes.
 - ii. Multimedia: Methods for embedding audio and video in an HTML page.
 - iii. Text Formatting: The use of , <i>, <u>, <mark>, and <blockquote> tags for text formatting.
- b) Write HTML code to generate the following forms: 7

Student Informations	
Your Name	
Gender	Male ☐ Female ☐
Email	
Address	
Your pic	Choose File No file chosen
Education	Master Degree v
Register	Master's Degree Bachelor's Degree Plus two SEE

3. a) Why CSS is used in Web designing? Explain different levels (types) of style sheets with example. 8

- b) How can you manipulate HTML elements using JavaScript? Provide examples to demonstrate adding, removing, and modifying content and attributes in the DOM. 7
4. a) Create a simple counter application. The page should display a number that starts at 0 and two buttons: Increase and Decrease. Clicking the buttons should update the number accordingly. 8
- b) What is dynamic stacking? Write a program in JavaScript to show dynamic stacking of three images. 7
5. a) Write a program in PHP to list out all prime numbers within a given range. 8
- b) Explain the origin, major features and arrays of PHP. 7
6. a) What are cookie and session in PHP? Explain the use of them with necessary program code. 8
- b) How do you connect PHP with MySQL? Write a PHP code that retrieves the name and password from database. 7
7. Write short notes on: (Any two) 2×5
 - a) Php file handling
 - b) Compare var, let, and const
 - c) Multimedia in HTML

POKHARA UNIVERSITY

Level: Bachelor
Programme: BE
Course: Web Technology

Semester: Spring

Year : 2025
Full Marks : 100
Pass Marks : 45
Time : 3 hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) A new intern is confused about why some URLs start with http// and others with https://. Use a real-world analogy to illustrate the difference, emphasizing security and data encryption. Also, give 5 differences between static and dynamic websites. 8
- b) Define internet, intranet and extranet. How SMTP protocol works? 7
2. a) What is a Frame? What are its advantages? Explain with an example. 8
- b) Design following layout. 7

Fill the form below

Name:	
Password:	
Gender:	☐ Male ☐ Female ☐ Others
Subject:	☐ Web ☐ C ☐ C++ ☐ C#
	Reset all Save

3. a) What is the function of selectors in CSS? Explain all CSS types with pros and cons. 7

OR

Differentiate <div> and tags in CSS with necessary program codes.

- b) What is form validation? Using JavaScript validate whether the form fields for name is blank or not and check the format for the email is right. 8

4. a) Create a JavaScript program to validate a form where the candidate's name must contain only alphabetic characters, and the score must be a number between 100 and 500. 8
- b) What do you mean by DOM in JavaScript? How do you get elements from documents? Write an example of all methods. Also, mention the difference between querySelector and querySelectorAll. 7

OR

Is there any possibility of dynamic stacking of images in JavaScript? Explain your answer with an example.

5. a) What are cookie and session in PHP? Explain the use of them with necessary program code. 8
- b) What are the differences between client-side and server-side scripting? Explain arrays, loops, and conditional statements in PHP. Also, explain how PHP is implemented with HTML, CSS, and JS. 7
6. a) Describe the different file handling modes in PHP. Also, write a PHP script that reads the content of firstFile.txt, converts every word to uppercase, and writes the result to secondFile.txt. 8
- b) Describe Starting, Storing and Destroying a Session. Explain with sample codes. Also, differentiate between include() and require() in php. 7
7. Write short notes on: (Any two) 2×5
- a) Associative Array in PHP
- b) Regular expression in PHP
- c) Media query in CSS

POKHARA UNIVERSITY

Level: Bachelor
Programme: BE
Course: Web Technology

Semester: Fall

Year : 2025
Full Marks : 100
Pass Marks : 45
Time : 3 hrs.

Candidates are required to give their answers in their own words as far as practicable.

The figures in the margin indicate full marks.

Attempt all the questions.

1. a) Discuss the need of web browser and web server in accessing the Internet. Also List the different MIME headers and explain them. 7
- b) What is a domain and fully qualified domain name? How can we register a domain name? Differentiate top-level and second-level domains. 8
2. a) Explain Standard HTML document Structure. How would you map image in HTML? 7
- b) Write HTML code to generate the following forms: 8

Student Informations

Register	Master Degree Bachelor's Degree Plus two SEE

3. a) What is the function of selectors in CSS? Explain all sorts of selectors used in CSS with an example. 7
- b) Why JavaScript is called dynamically typed Language? Explain with example how variables are declared in JavaScript. 8
4. a) Write a program in Java Script to validate a form. The user form includes user email, password and submit button. On clicking the submit button validate the following: 7
 - i. if the email or password fields are blank
 - ii. if the format used for email is right.
- b) What do you mean by events and event handling? How will you locate mouse cursor using JavaScript? Explain with code. 8

Page 1 of 2

5. a) How is array implemented in PHP? Differentiate between *foreach ()* loop and *each ()* function with example. 7
- b) Write PHP script to insert form data to database table on form submit. Where every data must be in lowercase before inserting into table. Also, develop the webpage as below: (No need to write CSS code) 8

Full Name	
Email	
Address	
Submit	

6. a) What is session? What is the importance of session handling in web programming? Explain. 7
- b) Make a login form with e-mail and password. Write a program to make dynamic login using php and MYSQL query. Your program must contain database connection file from php to MYSQL. 8
7. Write short notes on: (Any two) 2×5
 - a) Box model in CSS
 - b) Ordered and unordered list
 - c) Regular expression and pattern matching in PHP

Page 2 of 2
